1 Motivation

: with at least 2 similar / existing system

1.1 Daraz

1.2 Facebook

2 Problem statement

: in detail

3 Objectives & Project output

This project focuses on developing an innovative online marketplace with social media features to support Bangladesh's small and medium-sized businesses (SMBs). By combining e-commerce with social interaction, the platform offers an engaging experience. Users can browse a home page similar to a social media newsfeed showcasing shops and their products. Users can easily explore shop profiles, view detailed product information, and purchase products directly through the platform.

Our goal is to empower SMBs by providing them with a dedicated platform to showcase their businesses effectively, overcoming the challenges of competing in larger marketplaces. This initiative aims to enhance product visibility and foster growth for local enterprises in the digital era.

4 Effect on society

of your project

5 Requirement analysis

5.1 Basic Requirements

5.2 Functional requirements

5.3 Technical Requirements

Mention the design process model (Like Agile, DevOps) and why?

And design pattern (Like MVC, MVT, MVVM)

6 Methodology

Show different types of diagram (ER, DFD, UML)

Software Process Model (Like: Agile with sprint description, DevOps) and How? [Sample code]

Project developing resource (Model, Design pattern, framework, API, Dataset, etc.)

7 Final Result of your project

add some sample image of your project + testing script result

8 Project management

Project Timeline (According to process model) + Gantt chart

Version Control System commit snapshot

Finance management (According to project Module)

9 Conclusion/ Future work:

Learnings from this project work for art of project management, distributed and collaborative software development and risk analysis for developing complex software-intensive systems.
